

Infant Manikins

Echo Healthcare brings a new level of realism to medical training with Lifecast manikins.

The **Micro-Premie Baby (22 weeks)**, **Premature Baby (28 weeks)**, **Newborn Baby (36 weeks +)** and the **Infant (3-6 months)** feature lifelike fine details such as vasculature & underlying structures. Based on scans of real babies, features such as the ability to cannulate an umbilical cord, an ALS compatible airway and hand punched real hair are available. The Lifecast manikins are available in a wide range of ethnicities and are created to an average weight and size. The realistic weight, skin, and look encourage natural handling that creates emotional attachment and engagement amongst learners.
